PROJECTS

● NTTF

Digital Notice Board

A wireless LED notice board is a system that allows users to send data to a display board wirelessly using a mobile phone. The system consists of a Wi-Fi Module, a LED P10 display, and a power supply. The Wi-Fi module receives the data from the mobile phone and sends them to the Wi-Fi module. The Wi-Fi module then displays the data on the P10 display.

● NTTF

Urushya

Urushya is a small ,tracking device developed by us. It utilizes Wireless technology to connect with an Blynk platform, allowing users to locate and track their belongings through blynk app. The device emits a signal that can be detected by nearby Mobile phone , helping users pinpoint the location of their lost items..

● Personal

Home Automation

Home automation refers to the integration of smart devices and technology to control and automate various household functions. It allows users to remotely manage their appliances through smartphones at home.
